

- This tool is often used in NEE CCG area
- Restore 2 mini is a simpler version of the Restore 2 tool. Restore 2 mini focuses on observations only, whereas the original tool is designed for use alongside medical equipment such as blood pressure cuffs, pulse oximeters & thermometers. (not all services have this equipment)
- It has the same principal as the Significant 7 tool in that it is intended to be used when you think a resident is becoming unwell.
- It focuses on the same soft signs such as breathing, toilet, skin, hydration, nutrition, confusion, mood and mobility.
- This tool also requires an individual baseline so that the person undertaking the observations has an idea of what is normal for the individual.
- If the observations raise any concerns the tool then has a specified process for reporting the findings to health professionals (SBARD)
